

BUILDING A GREENER AND MORE SUSTAINABLE FUTURE FOR UKRAINIAN CITIES

What is SUN4Ukraine?

Sustainable Urban Net Zero Network for Ukraine (SUN4Ukraine) is a Horizon Europe project. It supports Ukrainian municipalities in **integrating climate neutrality goals** into recovery planning.

Why does it matter?

Climate Neutrality Planning can guide the reconstruction efforts to build cities that are:

- more energy-efficient
- more resilient
- more liveable
- healthier and cleaner

In December 2024, SUN4Ukraine selected **12 Flagship Municipalities**, among **105 municipalities** that expressed interest in the project.

Over **7,3 million people** live in these municipalities - near **25% of the total estimated today's Ukraine's** population.

How does it work?

Capacity Building Programme

A tailored learning programme offering training materials, tools and learning resources that are accessible through the NetZeroCities Portal.

Partnership Programme

Ukrainian municipalities are paired with EU Mission Cities from the EU Mission "100 Climate-Neutral and Smart Cities by 2030" for sharing experience and practical solutions.

Climate Neutrality Plans

Technical assistance to municipalities from emissions baselining through climate action planning to developing investable projects.

What will citizens gain?

SUN4Ukraine helps municipalities develop projects that can lead to:

renovated schools, hospitals and public buildings

cleaner air and healthier neighbourhoods

improved heating systems and energy efficiency

more resilient infrastructure and services

reduced energy waste and costs

stronger local planning for a safer future
